Design, plan, review.

Grove covers the software lifecycle in one loop. You set the design and the bar before an agent starts, and you read the evidence before anything merges.

REVIEW FEEDS BACK INTO DESIGN AND PLAN

DESIGN · GROVE STUDIO

A design to build from

1. Query the design. Find anything, change anything, see what a change would touch.
2. Link designs together, so one design can use parts of another.
3. Use calculated fields so values come from other values instead of being copied by hand.
4. Interact with your designs. Click through the screens, add records, switch roles, step through a flow.

PLAN · TASKS

Done means demonstrated

1. Enforce standards before task completion.
2. Automate the handoffs. Task pre and post hooks can start QA with a fresh agent.
3. Create and share reusable task lists with the whole team.

REVIEW · PREVIEW AND EVIDENCE

Easy review and feedback

1. Provide UI review directly in the browser.
2. Leave in-line code review feedback for the agent to work against.
3. Get an executive summary of every finished task, with screenshots and recordings.
