N-TREE STUDIOS

The Grove SDLC: precision for agent-built software.

AI agents are quick. What slows teams down is everything after: unclear requirements, long reviews and rework. Grove sets the target up front, so work comes back right the first time and ships sooner.

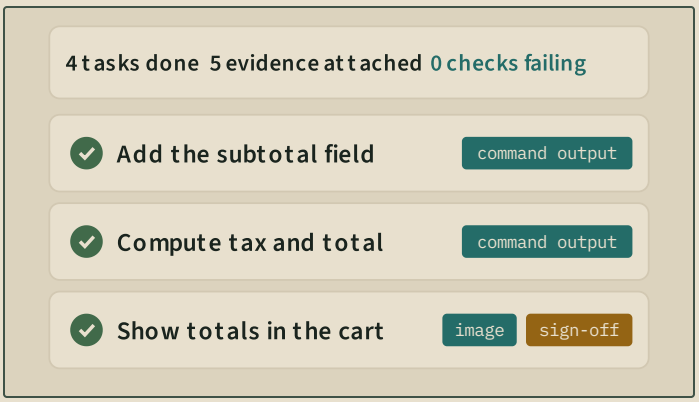

1 Fewer rebuilds

Everyone agrees on the design before code is written. Misalignment shows up while it costs a conversation, not a rewrite.

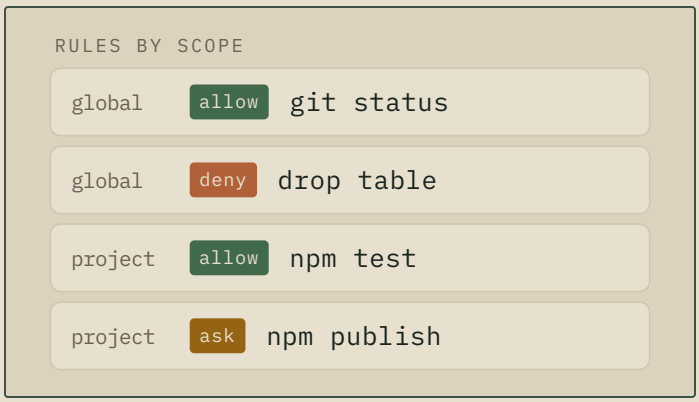

2 Shorter reviews

Every task comes back with screenshots, recordings or passing tests. Reviewers check results instead of redoing the work.

3 Status without the meeting

Finished work ends in an executive summary of what changed and the evidence for it.

4 Fewer interruptions

Set once what agents can and can't do. Your team stops approving the same thing over and over.
